<https://github.com/iamalittletester>

Find out for yourself

- Find releases in GitHub:
<https://github.com/SeleniumHQ/selenium/releases>
- Find releases on official page: <https://www.selenium.dev/downloads/#bindings>
- And the blog: <https://www.selenium.dev/blog/>

The screenshot shows the Selenium 4.8.0 release page. At the top, it says "Selenium 4.8.0" with a "Latest" badge. Below that is a "Changelog" section with a note to check component-specific changelogs and a list of languages: Ruby, Python, JavaScript, Java, DotNet, and IEDriverServer. There is a "Commits in this release" section with a link to view all commits. The "Assets" section is expanded to show a table of download links for IEDriverServer binaries.

| Asset Name | Size | Time |
|--------------------------------|---------|-------------|
| IEDriverServer_Win32_4.8.0.zip | 1.04 MB | Jan 23 |
| IEDriverServer_Win32_4.8.1.zip | 1.04 MB | 2 weeks ago |
| IEDriverServer_x64_4.8.0.zip | 1.12 MB | Jan 23 |
| IEDriverServer_x64_4.8.1.zip | 1.12 MB | 2 weeks ago |

What's included in recent releases?

- New features
- Latest browser support – need to support latest Chrome DevTools; fallback exists
- Remove deprecated code: due to not being used anymore; internal code; deprecation first, removal of code after a few releases
- Bug fixes per priority
- Consistent features across all bindings

What can you do to get a bug fixed faster?

- Add clear reproduction steps after making sure it really is a Selenium bug
- If bug already exists, 'upvote' for visibility
- Help the project by creating a pull request and fixing the bug :) Fix a bug, become a committer !

Still using Selenium < 4 ?

- https://www.selenium.dev/documentation/webdriver/getting_started/upgrade_to_selenium_4/
- DesiredCapabilities replaced by Options
- Removal of internal 'findbys' Java methods (e.g. 'findElement(s)ById')
- Wait timeout parameter now 'Duration'
- Some browser legacy code removed

New way to set Chrome headless

- Due to new Chrome headless implementation (v >109), convenience method is removed
- Instead create ChromeOptions and addArguments:

```
ChromeOptions options = new ChromeOptions();  
options.setHeadless(true);  
  
--> options.addArguments("--headless=new");  
WebDriver driver = new ChromeDriver(options);
```

Wheel input scrolling

- On Chromium browsers (e.g. Chrome, Edge, Opera)
- Element represents a WebElement

```
Actions actions = new Actions(driver);
```

```
actions.scrollToElement(element).perform();
```

```
actions.scrollByAmount(0, 500).perform(); -> DOWN
```

```
actions.scrollByAmount(0, -500).perform(); -> UP
```

Wheel input scrolling

```
WheelInput.ScrollOrigin scrollOrigin =  
WheelInput.ScrollOrigin.fromElement(element);  
actions.scrollFromOrigin(scrollOrigin, 0, 500)  
    .perform();
```

```
WheelInput.ScrollOrigin scrollOrigin =  
WheelInput.ScrollOrigin.fromElement(element, 0, -50);  
actions.scrollFromOrigin(scrollOrigin, 0, 500)  
    .perform();
```

Wheel input scrolling

```
WheelInput.ScrollOrigin scrollOrigin =  
    WheelInput.ScrollOrigin.fromViewport(10, 10);  
actions.scrollFromOrigin(scrollOrigin, 0, 500).perform();
```

(https://www.selenium.dev/documentation/webdriver/actions_api/wheel/)

Minimize window and fullscreen

```
driver.manage().window().minimize();
```

```
driver.manage().window().fullscreen();
```

[\(https://www.selenium.dev/documentation/webdriver/interactions/windows/\)](https://www.selenium.dev/documentation/webdriver/interactions/windows/)

Open new empty window or tab

```
driver.switchTo().newWindow(WindowType.TAB);
```

```
driver.switchTo().newWindow(WindowType.WINDOW);
```

[\(https://www.selenium.dev/documentation/webdriver/interactions/windows/\)](https://www.selenium.dev/documentation/webdriver/interactions/windows/)

Shadow DOM

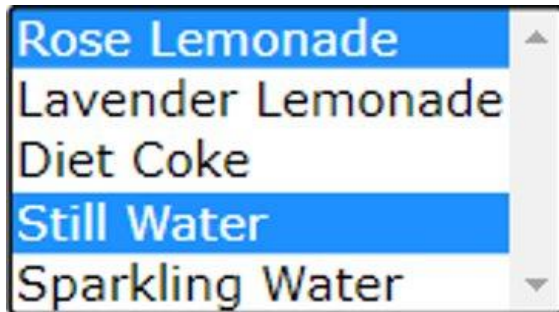

```
WebElement shadowHost =  
    driver.findElement(By.cssSelector(selectorOfShadowHost));  
SearchContext shadowRoot = shadowHost.getShadowRoot();
```

- For latest Chromium based browsers

https://developer.mozilla.org/en-US/docs/Web/Web_Components/Using_shadow_DOM

Element screenshot

```
FileUtils.copyFile(element.getScreenshotAs(OutputType.FILE),  
                    new File(newScreenshotLocation));
```

Full page screenshot in Firefox

```
FirefoxDriver firefoxDriver = new FirefoxDriver(); ...  
FileUtils.copyFile(  
    firefoxDriver.getFullPageScreenshotAs(OutputType.FILE),  
    new File(newFileLocation));
```

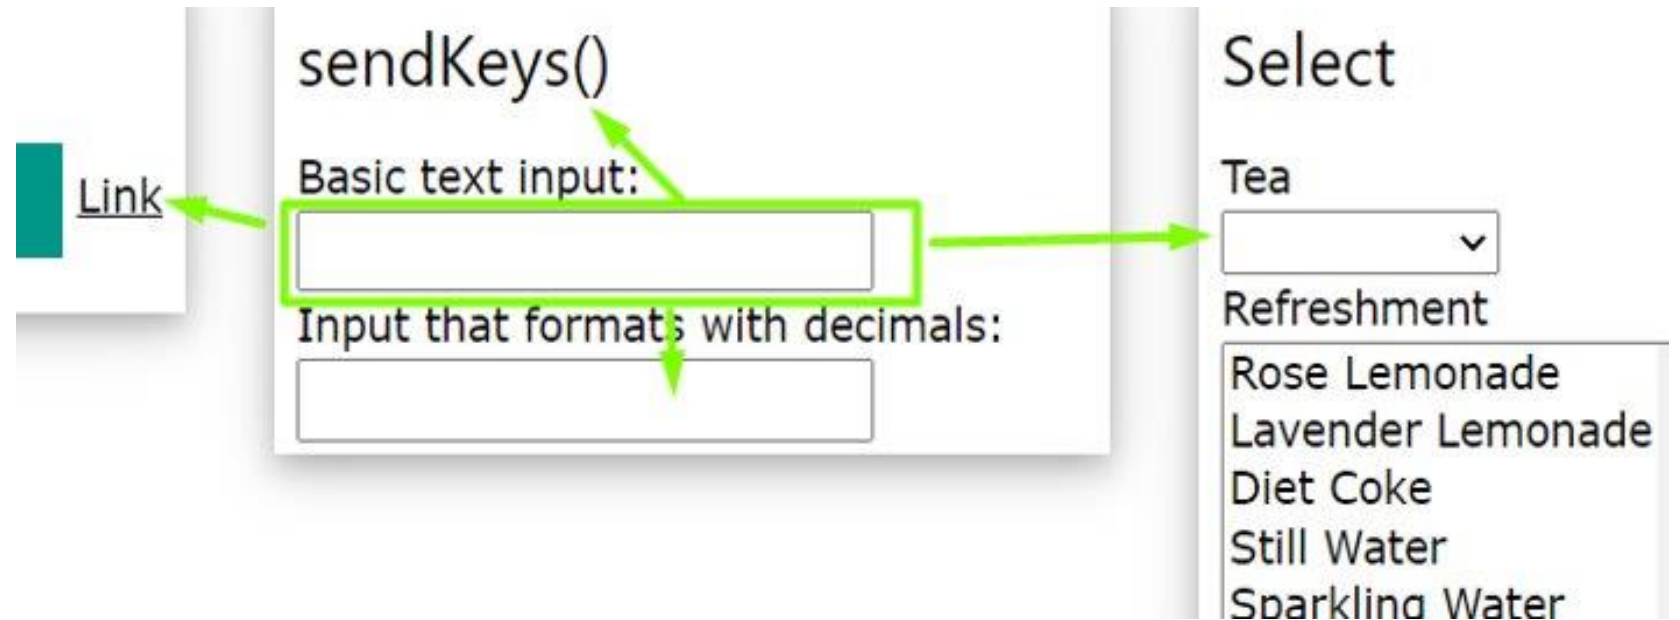

Relative locators

- <https://www.selenium.dev/documentation/webdriver/elements/locators/#relative-locators>
- Uses <https://developer.mozilla.org/en-US/docs/Web/API/Element/getBoundingClientRect> to identify elements
- Does not work with @FindBy

Relative locators

```
driver.findElement(RelativeLocator.with(By.cssSelector("a")).  
    toLeftOf(By.cssSelector("[type=\"text\"]"))).getText()
```

--> Link

Also: toRightOf, above, below

Selenium Manager

- No more need to set path to driver executable (e.g. 'webdriver.chrome.driver'); except if you want to override
- Default: download latest driver for installed browser (in a dedicated cache)
- Recent work: download the actual browser if it is not installed
- Track progress here: <https://github.com/orgs/SeleniumHQ/projects/5>

BiDi

- Cross browser means of bi-directional communication
- <https://w3c.github.io/webdriver-bidi/>
- https://www.selenium.dev/documentation/webdriver/bidirectional/bidirectional_w3c/
- Browsing context (e.g. navigate, open window): https://www.selenium.dev/documentation/webdriver/bidirectional/bidirectional_w3c/browsing_context/
- Log: https://www.selenium.dev/documentation/webdriver/bidirectional/bidirectional_w3c/log/

BiDi/CDP

- While BiDi is still in progress, you can use the CDP protocol for some tasks
- Some details on the protocol: <https://chromedevtools.github.io/devtools-protocol/>
- What can you do with CDP: https://www.selenium.dev/documentation/webdriver/bidirectional/bidi_api
- Status of BiDi implementation by the browser vendors: <https://wpt.fyi/results/webdriver/tests/bidi?label=experimental&label=master&aligned&view=subtest>

HttpClient

- Used for communication with browser, BiDi and Grid modules
- Currently used client not in development
- Plans to upgrade Selenium project to higher Java versions -> incompatibility
- Dedicated selenium-http-jdk-client: <https://www.selenium.dev/blog/2022/using-java11-httpclient/> (also helps fix issue with CORS header in Chrome 111+)

Virtual Authenticator

- Support for passwordless, public-key authentication (WebAuthentication) using an authenticator
- Spec: <https://www.w3.org/TR/webauthn-2/>
- Examples: <https://github.com/SeleniumHQ/selenium/blob/trunk/java/test/org/openqa/selenium/virtualauthenticator/VirtualAuthenticatorTest.java>
- Documentation: https://www.selenium.dev/documentation/webdriver/interactions/virtual_authenticator/

InvalidSelectorException

- InvalidSelectorException now extends WebDriverException instead of NoSuchElementException.
- <https://www.selenium.dev/blog/2023/invalid-selector-exception-has-changed/>

Grid and observability

- New architecture in Grid 4: components (e.g. Router, Session Queue, etc). See <https://www.selenium.dev/documentation/grid/components/>
- Various run modes: standalone, hub, distributed
- To understand what is going on during the test: observability
- https://www.selenium.dev/documentation/grid/advanced_features/observability/

Testing beta and dev browser channels

- Docker and Grid: <https://www.selenium.dev/blog/2022/dev-and-beta-channel-browsers-via-docker-selenium/>

docker-compose-v3-beta-channel.yml:

```
# To execute this docker-compose yml file use `docker-compose -f docker-compose-v3-beta-channel
# Add the `-d` flag at the end for detached execution
# To stop the execution, hit Ctrl+C, and then `docker-compose -f docker-compose-v3-beta-channel
version: "3"
services:
  chrome:
    image: selenium/node-chrome:beta
    shm_size: 2gb
    depends_on:
      - selenium-hub
    environment:
      - SE_EVENT_BUS_HOST=selenium-hub
      - SE_EVENT_BUS_PUBLISH_PORT=4442
      - SE_EVENT_BUS_SUBSCRIBE_PORT=4443
```
